

The Solution to Our U.S. Immigration Problems – Not One, But 327 Million Walls!

Presented is a link to a 9-page letter that provides a fairly detailed overview of my “prudent and practical” solution for our nation’s long-standing problems with our critically broken Immigration System. The letter is addressed to leadership of the US Senate and House of Representatives, both Republican and Democratic parties and a few others.

However, it is written to my fellow American citizens. My problem-solving background tells me the majority of citizens will find the proposal acceptable, simply because it solves the problem! This proposal provides a real solution to our nation’s broken immigration and population control systems. It is a comprehensive reform of US Immigration Control and American Population Management. The current DACA problem is only considered as a side issue, but will finally be dealt with herein.

I believe President Trump could support this approach to confronting the immigration crisis and that the US Congress could quickly legislate it into law. Well over 60% of American citizens will support this balanced and comprehensive approach. Of course, there will be some individuals and groups within our nation that consider the approach too tough in some ways. However, in a nation of 326,000,000 citizens not even the most obvious solutions will please everyone.

I hope you find this to be a comprehensive, logical, and practical solution...
